REMARKS

25X1X

1. In the spring of 1950, the new administration building of the Bucharest-Baneasa (Xc 65) airfield was completed and put into operation. The building is about 100 meters from the main entrance, between the entrance and the first two hangars. All offices of the civilian airfield were housed in the building, which consisted of a round middle section 10 meters in diameter and three wings, 12x50 meters each, set at an angle of 120 degrees. All sections of the building are four-storied. A glass cupola housing the weather station was on top of the center section. Air travellers said that the cupola could be seen from a long distance when in the air. *
